Constituent of Symbiosis International (Deemed University), Pune

Name of Student: Sumit Kumar Mahato

PRN: 25070122195

Subject: Programming with Java

Sem: III AY: 2026-27

Assignment No: 13

TITLE: Write a Java program to perform reading from and writing to a file using file handling.

Problem Statement

Write a Java program to perform reading from and writing to a file using file handling operations.

Learning Objectives

To perform file reading and writing operations using Java file handling classes.

Theory

Java provides file handling through the java.io package. Classes such as File, FileReader, FileWriter, BufferedReader, and BufferedWriter are used to perform input and output operations. File handling enables permanent storage and retrieval of application data. Proper exception handling is necessary to manage file-related errors. These concepts are essential for data persistence.

Conclusion:

The programs successfully demonstrate file handling operations in Java. FileWriter was used to write employee and patient details into files, while FileReader and BufferedReader were used to read and display the stored information. The try-catch block was used to handle possible file-related exceptions. Thus, Java file handling provides an efficient way to store and retrieve data permanently from files.

Exercise

1. Create a program to write and read **employee details from a file**.

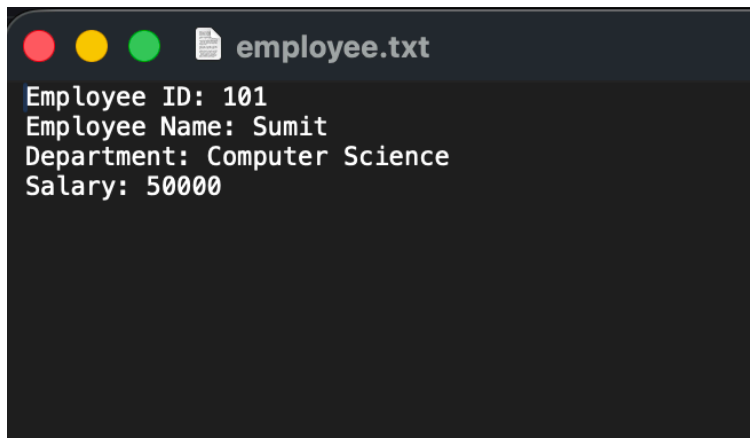

```
Users > sumit > Documents > java > java1 > J EmployeeFileHandling.java > ...
1  import java.io.*;
2
3  public class EmployeeFileHandling
4  {
    Run | Debug
5      public static void main(String[] args)
6      {
7          try
8          {
9              // Writing to file
10             FileWriter writer = new FileWriter("employee.txt");
11
12             writer.write("Employee ID: 101\n");
13             writer.write("Employee Name: Sumit\n");
14             writer.write("Department: Computer Science\n");
15             writer.write("Salary: 50000");
16
17             writer.close();
18
19             System.out.println("Employee details written successfully.\n");
20
21             // Reading from file
22             FileReader reader = new FileReader("employee.txt");
23             BufferedReader br = new BufferedReader(reader);
24
25             String line;
26
27             System.out.println("Employee Details:");
28
29             while((line = br.readLine()) != null)
30             {
31                 System.out.println(line);
32             }
33
34             br.close();
35         }
    }
```

```
36         catch(IOException e)
37         {
38             System.out.println("Error: " + e.getMessage());
39         }
40     }
41 }
```

Output:

```
[Running] cd "/Users/sumit/Documents/java/java1/" && javac EmployeeFileHandling.java && java EmployeeFileHandling
Employee details written successfully.
```

```
Employee Details:
Employee ID: 101
Employee Name: Sumit
Department: Computer Science
Salary: 50000
```

2. Create a Java program to write **patient details** (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

```
Users > sumit > Documents > java > java1 > PatientFileHandling.java > ...
1  import java.io.*;
2
3  public class PatientFileHandling
4  {
5      public static void main(String[] args)
6      {
7          try
8          {
9              // Writing to file
10             FileWriter writer = new FileWriter("patient.txt");
11
12             writer.write("Patient ID: 201\n");
13             writer.write("Patient Name: Rahul\n");
14             writer.write("Age: 25\n");
15             writer.write("Diagnosis: Fever");
16
17             writer.close();
18
19             System.out.println("Patient details written successfully.\n");
20
```

```

20
21         // Reading from file
22         FileReader reader = new FileReader("patient.txt");
23         BufferedReader br = new BufferedReader(reader);
24
25         String line;
26
27         System.out.println("Patient Details:");
28
29         while((line = br.readLine()) != null)
30         {
31             System.out.println(line);
32         }
33
34         br.close();
35     }
36     catch(IOException e)
37     {
38         System.out.println("Error: " + e.getMessage());
39     }
40 }
41 }

```

Output:

```

[Running] cd "/Users/sumit/Documents/java/java1/" && javac PatientFileHandling.java && java PatientFileHandling
Patient details written successfully.

```

```

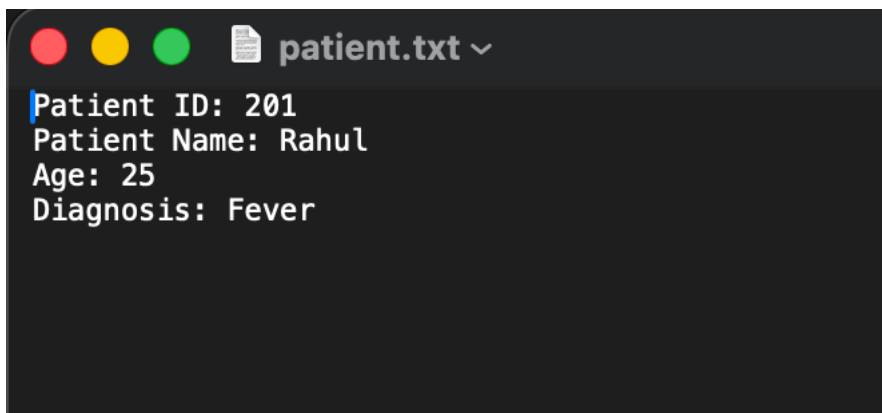

Patient Details:
Patient ID: 201
Patient Name: Rahul
Age: 25
Diagnosis: Fever

```

```

[Done] exited with code=0 in 0.31 seconds

```

A screenshot of a text editor window titled "patient.txt". The window contains the following text:

```

Patient ID: 201
Patient Name: Rahul
Age: 25
Diagnosis: Fever

```
